In Search of incredible Talent

You can become rich by stealing noble ideas. However, You can't become wise person(s). It is a Fact that the destinations of Suns/Stars and everything attached to suns/stars, are Black Holes. The questions is what about the destinations of Black Holes? The core of our planet known as earth is a molten matter! When stars are broken into their fundamental physical or chemical or both elements level. Then planets like earths and stars are born. It seams smaller stars, when covered with cold matter, can become or turn into, Earths or planets of larger stars, those that can't be covered with cold matter, will remain as stars or suns!

It appears is stated that BLACK HOLES ROTATION STARTS with two Black holes nearby and then they merge into oone Giant one and merged Black hole keep rotating for infinite (> Trillion) Years!
