Distance Travelled in ONE year at the Speed of Light = ONE YUG

TEN YUG = 1 MAHA YUG

1000 YUG = 1 Grand YUG

100,000 YUG = 1 LAKH YUG → Correct pronunciation is लॅख / लॅखां It is not pronounced as "LAC" or "LACS"

10 Lakh YUG = 1 Million YUG

10,000 Lakh YUG = 1 Billion YUG = ∞ for humans

Why our Sun looks perfectly Round?
Because it is more than 1000s Lakh Yug away
from "BLACK HOLE"

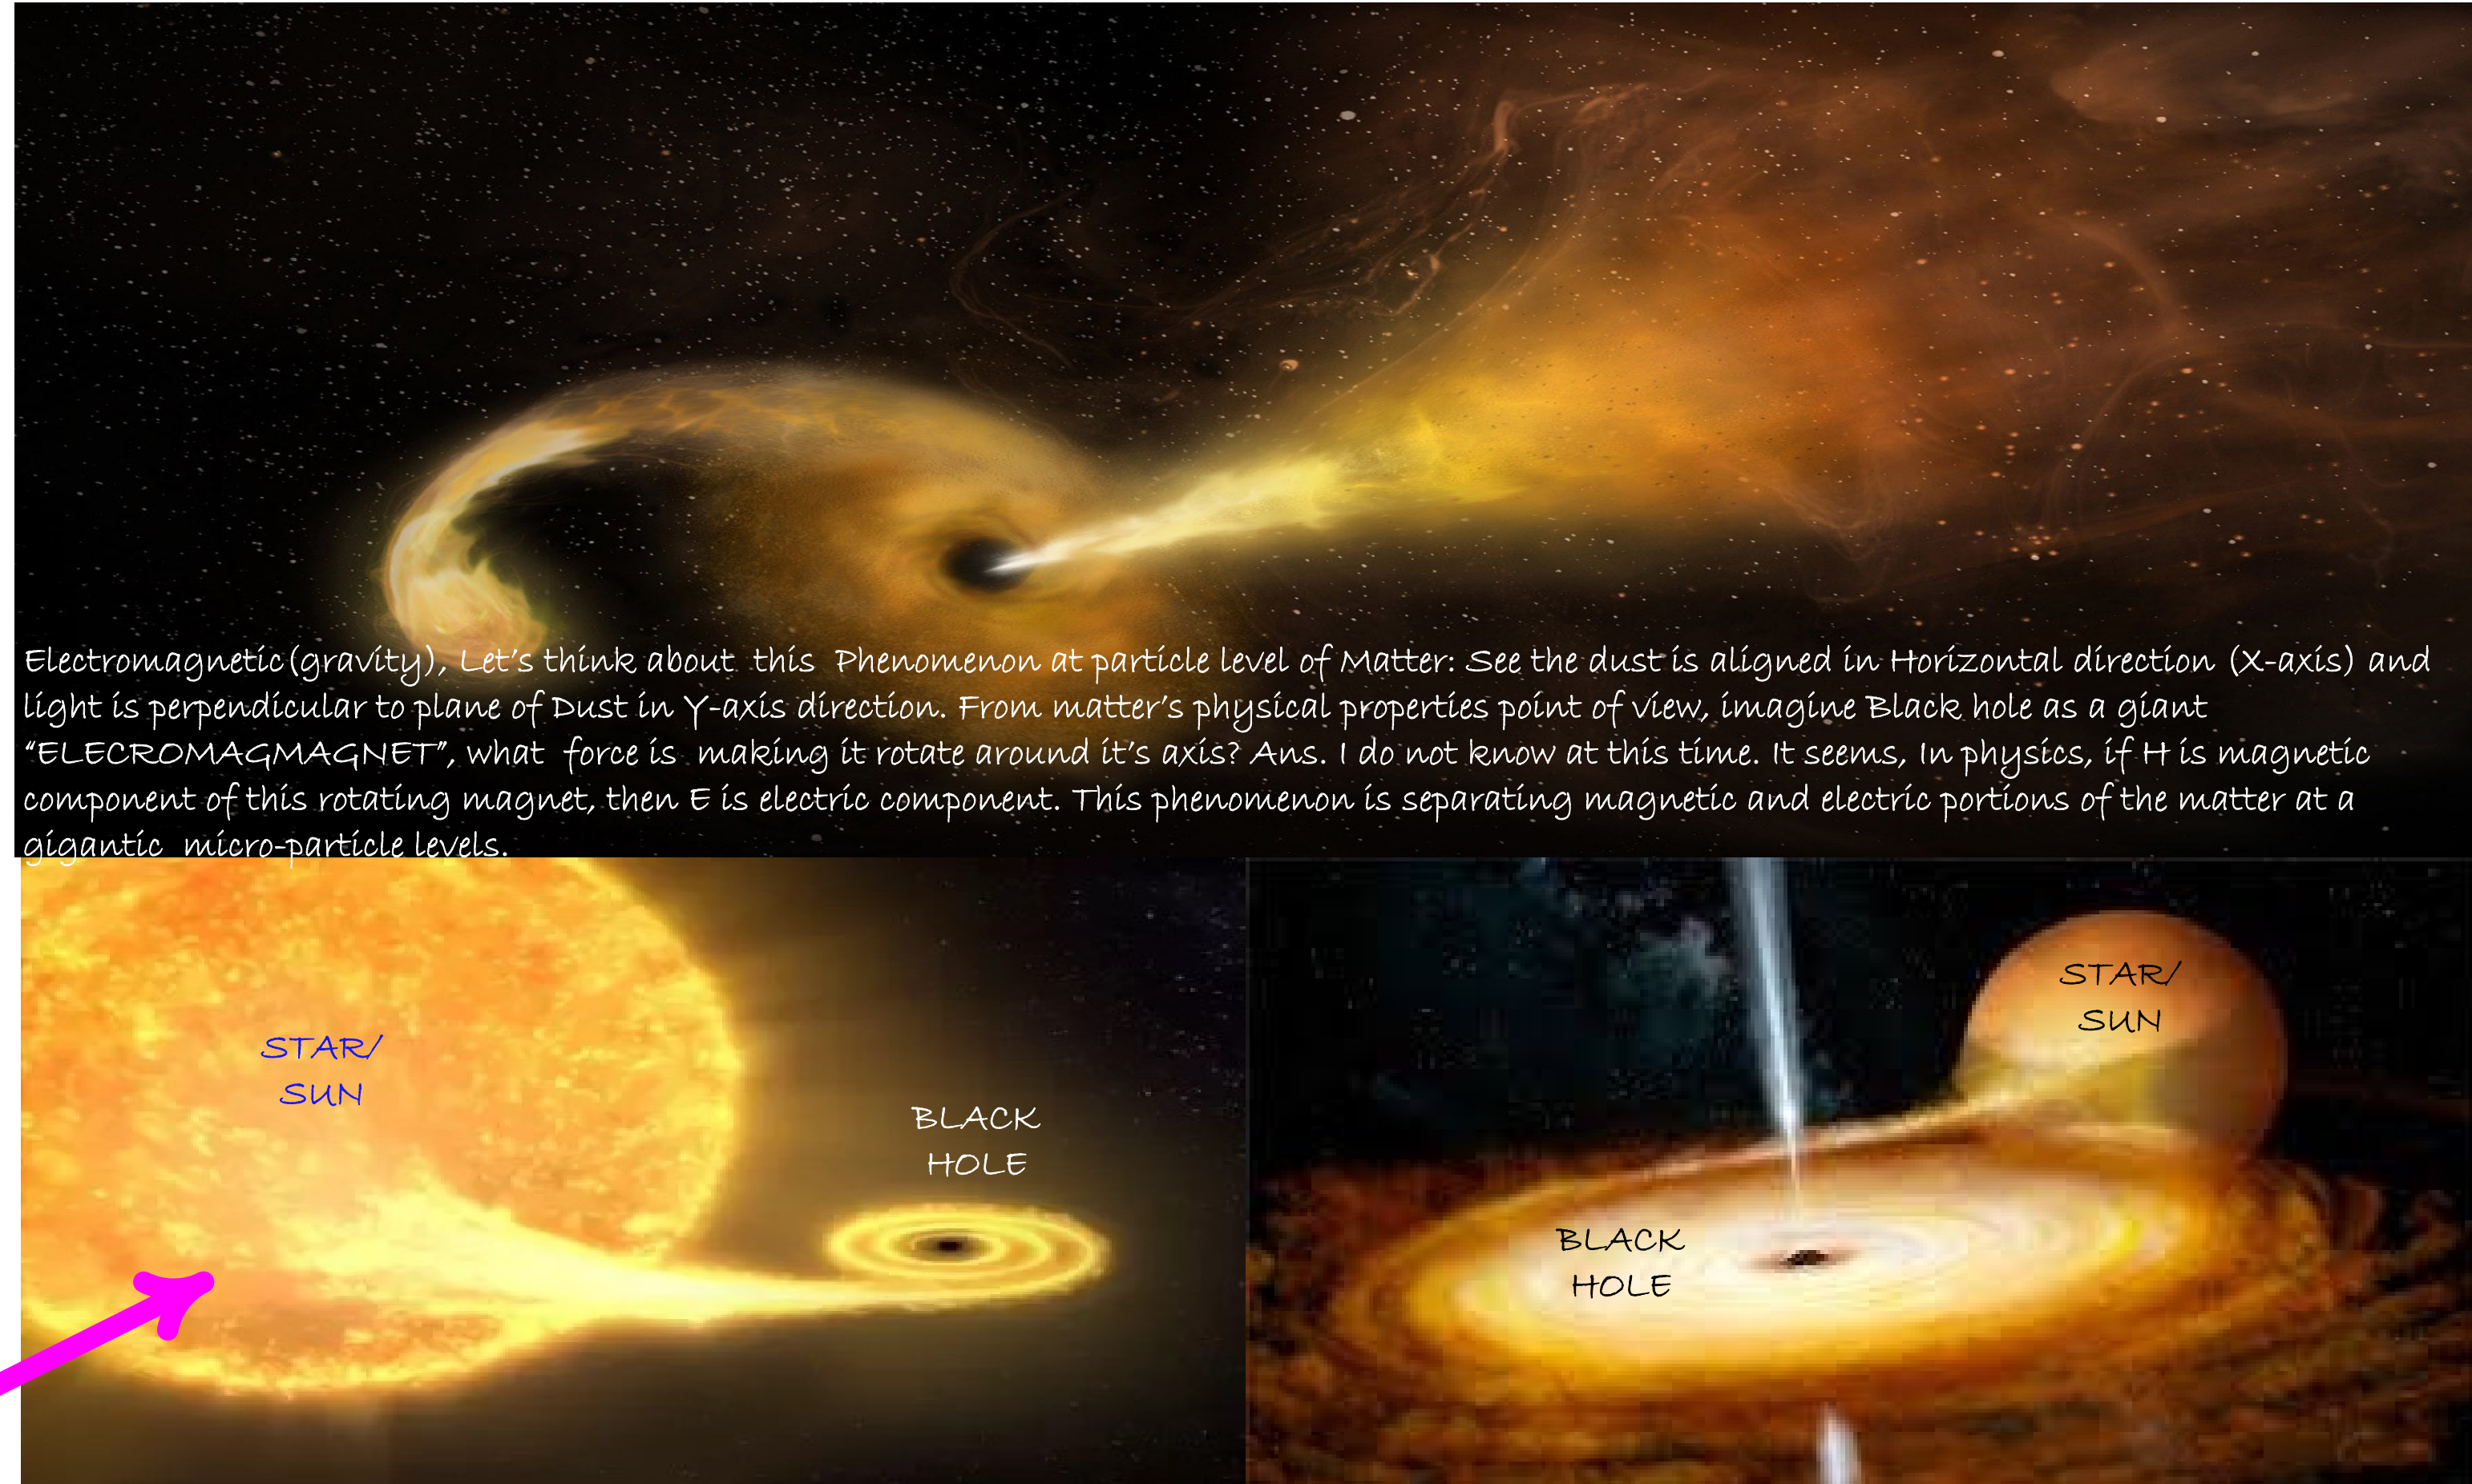

You can behave like manmukh or Gurmukh

What's Manmukh; these are those people who do
not believe in God.

What's Gurmukhi; these are those people who do
believe in God. They prefer to live an dlet live
and have genuine hearts!

Racism is worst than
COVID-19

When Sun is less than 1 Yug
away from Black Hole(s), it
looks like this

Electromagnetic (gravity), Let's think about this Phenomenon at particle level of Matter: See the dust is aligned in Horizontal direction (X-axis) and light is perpendicular to plane of Dust in Y-axis direction. From matter's physical properties point of view, imagine Black hole as a giant "ELECTROMAGNET", what force is making it rotate around its axis? Ans. I do not know at this time. It seems, In physics, if H is magnetic component of this rotating magnet, then E is electric component. This phenomenon is separating magnetic and electric portions of the matter at a gigantic micro-particle levels.
